No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

functional gene encoding in Embden-Meyerhof carbon pathway high growth methanotrophic bacterial strain, useful for producing the cell proteins, grows on a Cl carbon substrate, and comprises a grows a C1 carbon substrate, and comprises

Claim 11; Page 141-142; 157pp; English

protein and for the biotransformation of a nitrogen-containing compound, ce gr ammonia, nitrate, nitrite or nitrogen. It is also ussful for the groduction of a feed product comprising a protein, carbohydrates and a contribute in methane-containing environments such as landfills, waste water treatment systems or anywhere that methane, oxygen and nitrates are consistent. The bacterial strain of the invention can be used as a contribution of biomass including proteins, carbohydrates and contribution of biomass including proteins, carbohydrates and a wide variety of pigments (particularly for isoprenoid pigments for the conversion of the invention of terpenoid and compounds, useful as pigments and as monomers in polymeric contential strain production of exopolysaccharides at high levels.

Considerial strain production represent high growth methanotrophic constraints and as monomers in polymerial sequences ABG61591-ABG61590 represent high growth methanotrophic contents and methanotrophic constraints and methanotr The invention relates to a high growth methanotrophic bacterial strain, which grows on a C1 carbon substrate e.g. methane and methanol, and comprises a functional Embden-Meyerhof carbon flux pathway comprising a comprises a functional Embden-Meyerhof bosobofrutokinase enzyme or a 16s coding a pyrophosphate dependent phosphofrutokinase enzyme or a The bacterial strain is useful for the production of single cell strain proteins of the invention

producing carotenoid compounds e.g. antheraxanthin and astaxanthin, by using microorganisms having a nucleic acid molecule encoding enzymes in the carotenoid biosynthetic pathway and which metabolize single carbon

Claim 42; Page 112-114; 156pp; English

encoding an enzyme in the carotenoid biosynthetic pathway, under the control of regulatory sequences, and contacting the host cell with carl substrate to produce a carotenoid compound. The method is useful for producing carotenoid compounds such as antheraxanthin and astaxanthin, using microorganism having a nucleic acid molecule encoding enzymes in the carotenoid biosynthetic pathway and which metabolise single carbon substrates. The carotenoids have potent anti-oxidant properties useful diet, and aquaculture elements. The carotenoids are also useful as intermediates in the synthesis of steroids flavours and fragrances and compounds for potential electro-optic applications. The present sequence is Methylomonas 16a sp. D-1-deoxyxylulose-5-phosphate reductoisomerase (Dxr) enzyme used in the invention. The invention relates to a method for producing carotenoid compounds. The method comprises a transformed metabolising host cell, comprising suitable levels of isopentenyl pyrophosphate and a nucleic acid molecule carbon

                                                                                                                                                    The present invention relates to a new nucleic acid molecule encoding an isoprenoid biosynthetic enzyme isolated from Methylomonas 16a. The invention is useful for obtaining a nucleic acid molecule encoding an isoprenoid compound biosynthetic enzyme, and for the invention are also useful for regulating isoprenoid biosynthesis in an organism and for production regulating isoprenoid biosynthesis in an organism and for producing recombinant organisms for producing various isoprenoid compounds. The mucleic acid is also useful for feed additive, for the production of keratemoids and their derivatives, isoprenoid intermediates, and as pure products useful as pigments, flavours and fragrances. The present amino acid sequence represents the Methylomonas 16a open reading frame 2 (ORF2) dxr (1-deoxyxylulose-5-phosphate reductoisomerase enzyme) protein of the invention, as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isoprenoid biosynthetic enzyme; isoprenoid compound; feed additive; keratenoid; pigment; flavour; fragrance; open reading frame 2; ORF2; dxr; 1-deoxyxylulose-5-phosphate reductoisomerase enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Methylomonas

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                뮹
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    片
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                             The invention relates to methods and materials for the production of isoprenoids. More particularly the invention provides isolated nucleic acids, substantially pure polypeptides, host cells, and methods for producing various isoprenoid compounds. The polypeptides are useful for the production of isoprenoids, especially CoQ(10). Expressing the pure polypeptides, which has 1-deoxyxylulose-5-phosphate synthase (DXS) activity or decaprenyl diphosphate synthase (DXS) activity, is useful for increasing production of CoQ(10) in a cell having endogenous DDS activity. This sequence represents a protein relating to the isoprenoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Substantially pure polypeptides having e.g., 1-deoxyxylulose-5-phosphate synthase activity,

The invention relates to methods and materials for the production of isoprenoids. More particularly the invention provides isolated nucleic acids, substantially pure polypeptides, host cells, and methods for producing various isoprenoid compounds. The polypeptides are useful for the production of isoprenoids, especially CoQ(10). Expressing the pure polypeptides, which has 1-deoxyxylulose-5-phosphate synthase (DXS)
                                                                                                                                                                                                                                                                                                                                                                Substantially pure polypeptides having e.g., 1-deoxyxylulose-5-phosphate synthase activity, production of isoprenoids, especially CoQ(10)
                                                                                                                                                                                                                                                                                       Disclosure; Fig 32; 246pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          28-SEP-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polypeptides, which has 1-deoxyxylulose-5-phosphate synthase (DXS) activity or decaprenyl diphosphate synthase (DDS) activity, is useful for increasing production of CoQ(10) in a cell having endogenous DDS activity. This sequence represents a protein relating to the isoprenoid production of the invention.
                                                                                                                                                                                                      04-APR-2002
                                                                                                                                                                                                                                                                                                                                                               Isoprenoid; CoQ(10); 1-deoxyxylulose-5-phosphate synthase; decaprenyl diphosphate synthase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        isoprenoids. More particularly the invention provides isolated nucleic acids, substantially pure polypeptides, host cells, and methods for producing various isoprenoid compounds. The polypeptides are useful for the production of isoprenoids, especially CoQ(10). Expressing the pure
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to methods and materials for the production of isoprenoids. More particularly the invention provides isolated nucleic acids, substantially pure polypeptides, host cells, and methods for producing various isoprenoid compounds. The polypeptides are useful for the production of isoprenoids, especially CoQ(10). Expressing the pure polypeptides, which has 1-deoxyxylulose-5-phosphate synthase (DXS) activity, is useful for increasing production of CoQ(10) in a cell having endogenous DDS activity. This sequence represents a protein relating to the isoprenoid activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Substantially pure polypeptides having e.g., 1-deoxyxylulose-5-phosphate synthase activity, production of isoprenoids, especially CoQ(10)

Also disclosed are the nucleic acid molecules encoding the proteins are antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABP76736-ABP81046 represent nucleic acid molecules of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         12-FEB-2001; 2001GB-0003424

                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to proteins from Neisseria gonorrhoeae. Also disclosed are the nucleic acid molecules encoding the proteins at antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABP76736-ABP81046 represent nucleic acid molecules of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New protein from Neisseria gonorrheae, medicament for treating or preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to methods and materials for the production of isoprenoids. More particularly the invention provides isolated nucleic acids, substantially pure polypeptides, host cells, and methods for producing various isoprenoid compounds. The polypeptides are useful for the production of isoprenoids, especially CoQ(10). Expressing the pure polypeptides, which has 1-decxyxy/ulose-5-phosphate synthase (DXS) activity, is useful for increasing production of CoQ(10) in a cell having endogenous DDS activity. This sequence represents a protein relating to the isoprenoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Substantially pure polypeptides having e.g., 1-deoxyxylulose-5-phosphate synthase activity, production of isoprenoids, especially CoQ(10)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI;

                                                                                                                                                                                                                                                                                                                                                              The invention relates to methods and materials for the production of isoprenoids. More particularly the invention provides isolated nucleic acids, substantially pure polypeptides, host cells, and methods for producing various isoprenoid compounds. The polypeptides are useful for the production of isoprenoids, especially Cog(10) Expressing the pure polypeptides, which has 1-deoxyxylulose-5-phosphate synthase (DIS) activity or decaprenyl diphosphate synthase (DIS) activity, is useful for increasing production of Cog(10) in a cell having endogenous DDS activity. This sequence represents a protein relating to the isoprenoid production of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Substantially pure polypeptides having e.g., 1-deoxyxylulose-5-phosphate synthase activity, production of isoprenoids, especially CoQ(10)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AA021877

More particularly the invention provides isolated nucleic acids, substantially pure polypeptides, host cells, and methods for producing various isoprenoid compounds. The polypeptides are useful for the production of isoprenoids, especially CoQ(10). Expressing the pure polypeptides, which has 1-deoxyxyiutose-5-phosphate synthase (DXS) activity, is useful for increasing production of CoQ(10) in a cell having endogenous DDS activity. This sequence represents a protein relating to the isoprenoid activity. This sequence represents a protein relating to the isoprenoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Substantially pure polypeptides having e.g., 1-deoxyxylulose-5-phosphate synthase activity, useful production of isoprenoids, especially CoQ(10) -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          13-SEP-2002

The invention relates to modulating an activity of a DXR reductoisomerase enzyme of Haemophilus influenzae, comprising contacting the enzyme with a compound that modulates non-mevalonate isoprenoid biosynthesis - synthesis of menaquinone or ubiquinone. Compounds of the invention act as virucides. The method is useful for treating a mammal or mammalian tissue infected with H. influenzae having DXR reductoisomerase enzyme, e.g. a human or a domestic animal. In particular, the method is useful for treating ear infections, conjunctivitis, meningitis, pneumonia, conjunctivitis, bacteraemia, sinusitis, pleural empyema, endocardicis and epiglottitis. The current sequence represents the H. influenzae DXR reductoisomerase anzyme of treating earnesses. (e.g. ear infections or pneumonia)
modulator of its activity -Modulating Haemophilus influenzae DXR reductoisomerase enzyme activity, useful for treating mammals or tissues infected with H. influenzae (e.g. ear infections or pneumonia) by contacting the enzyme with a reductoisomerase enzyme polypeptide sequence.

Note: In the sequence listing, on page 40-44 of the specification, is given an amino acid sequence that is also described as SEQ ID 2, is the identifier of the current sequence. This sequence is given in record ABB09437, and contains the amino acids given in the current sequence but with a large insertion of extra amino acids that are no Claim 6(i); Page 5; 44pp; English. which

More particularly the invention provides isolated nucleic acids, substantially pure polypeptides, host cells, and methods for producing various isoprenoid compounds. The polypeptides are useful for the production of isoprenoids, especially CoQ(10). Expressing the pure polypeptides, which has 1-deoxyxylulose-5-phosphate synthase (DXS) activity or decaprenyl diphosphate synthase (DDS) activity, is useful for increasing production of CoQ(10) in a cell having endogenous DDS activity. This sequence represents a protein relating to the isoprenoid
                                                                                                                                        29-SEP-2000; 2000US-236580P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to methods and materials for the production of isoprenoids. More particularly the invention provides isolated nucleic acids, substantially pure polypeptides, host cells, and methods for producing various isoprenoid compounds. The polypeptides are useful for the production of isoprenoids, especially CoQ(10). Expressing the pure polypeptides, which has 1-deoxyxylulose-5-phosphate synthase (DXS) activity or decaprenyl diphosphate synthase (DDS) activity, is useful for increasing production of CoQ(10) in a cell having endogenous DDS activity. This sequence represents a protein relating to the isoprenoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Substantially pure polypeptides having e.g., 1-deoxyxylulose-5-phosphate synthase activity, useful for the production of isoprenoids, especially CoQ(10) -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

Sequence 21113, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: MARC J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND ACID SEQUENCES RELATING TO P.

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

PILE REFERENCE: 107196,136

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR PILING DATE: 1998-02-18

PRIOR PILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

INUMBER: OF SEQ ID NOS: 33142

SEQ ID NO 21113

LENGTH: 617

TYPES: PRT

CORGANISM: Pseudomonas aeruginosa

US-09-252-991A-21113

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PATENT NO. 656298

GENERAL INFORMATION:
APPLICANT: GATY L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
FILE REFERENCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT TEILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
SEQ ID NO 7199
LENGTH: 398
TYPE: DEF
                               GÉNERAL INFORMÁTION:
APPLICANT: Croteau, Rodney B
APPLICANT: Lange, Bernd M
TITLE OF INVENTION: 1-DEOXY-D-XYLULOSE-5-PHOSPHATE REDUCTOISOMERASE,
TITLE OF INVENTION: METHODS OF USE
FILE REFERENCE: MSUR14977
CURRENT APPLICATION NUMBER: US/09/491,362
CURRENT FILING DATE: 2000-01-26
CARLIER APPLICATION NUMBER: 60/118,349
EARLIER FILING DATE: 1999-02-03
NUMBER OF SEQ ID NOS: 13
                                                                                                                                                                                                                           Sequence 7, Application US/09491362 Patent No. 6281017
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -09-328-352-7199
